ILLUSTRATED WRITING SAMPLE

Under-sink disposer

An illustrated writing sample for a same-model replacement with no dishwasher connection.

This portfolio excerpt covers selected mechanical steps and completion checks. Use the instructions for your exact model for the full procedure, including electrical work.

Before you begin

Disconnect power at the breaker or fuse box before service. Support the disposer before releasing the mounting ring, and keep your head and body out from under the unit.

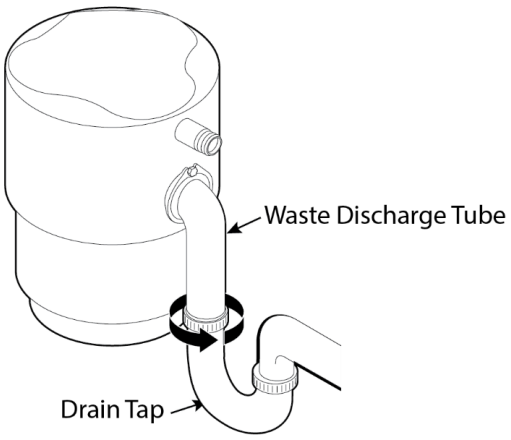

Remove the existing disposer

1 **Disconnect the drain.**

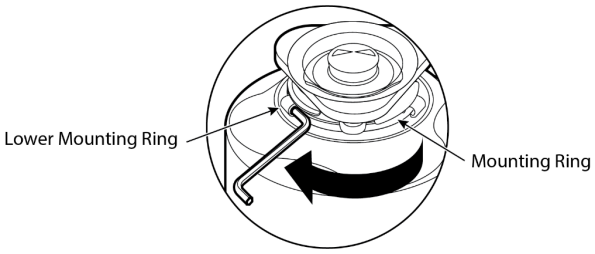

Place a container under the drain connection. Separate the drain trap from the waste discharge tube.

2 **Support and release the disposer.**

Support the unit from below. Use the model’s specified tool to release the lower mounting ring, then lower the unit under control.

Replacement and checks

Under-sink disposer

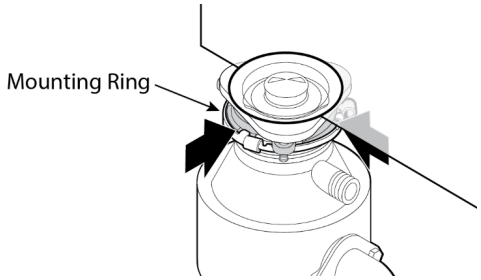

Mount the replacement

3 **Hang the replacement disposer.**

Align the three mounting tabs with the ramps on the mounting ring. Engage the tabs using the method shown in the model’s instructions.

4 **Check the mount and reconnect the drain.**

Confirm that all three tabs are past the ridges on the ramps. Reconnect the discharge tube to the drain according to the model’s instructions.

Mounting ring and tab engagement

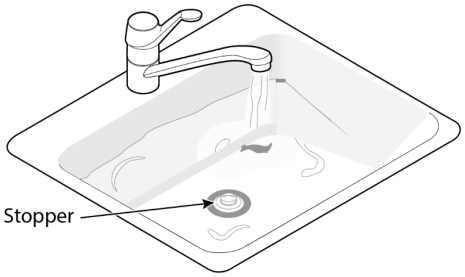

Verify the installation

5 **Check for leaks.**

Fill the sink with water, then remove the stopper. Observe the disposer’s plumbing joints while the sink drains. If any joint leaks, correct it and repeat the check.

6 **Confirm operation.**

After the plumbing check passes, follow the model’s instructions to restore power and perform its operational check.
